

Arundel Rivers Federation Water Quality Report:

Only one site failed this week - **Hillsmere Beach**.

As a reminder, these samples are collected Thursday morning and go through a 24 hour processing at Anne Arundel Community College. Rainfall can impact bacteria results (often increasing bacteria in the water). We are testing for enterococcus, which is an indicator of E coli. We follow the EPA and State recommendation of a threshold of 104cfu (colony forming units).
